

Quantum Fox Multi-Weapon User Bible

Setup Instructions:

1. Install Python and dependencies: `pip install -r requirements.txt`
2. Fill in `.env` with your API keys and email credentials.
3. Run deploy script: `bash deploy_quantum_fox.sh [paper|live]`
4. Check `backend/reports/daily_report.pdf` for top trades.

Daily Usage:

- Toggle Paper/Live mode with deploy script argument.
- View top 3 trades and P/L in `daily_report.pdf`.
- Modify `configs/live.json` and `configs/paper.json` for custom parameters.

Troubleshooting:

- Ensure all dependencies are installed.
- Update API keys in `.env` and `configs` if errors occur.

Tips:

- Streamlit hotkeys available in app.
- Monitor `backend/reports/trade_log.json` for executed trades.
